

# Modernization Kit ASSA ABLOY M External buttons for industrial doors

ASSA ABLOY

ASSA ABLOY Entrance Systems

The global leader in  
door opening solutions

## Key Benefit

Convenience

Efficiency

## A wide range of external activators to open the door

### External push buttons

It is not always convenient to have the control unit as the only method to open the door. In some cases an extra push button may be handy to be able to open the door from further away.

An external push button with 5m cable can be installed to create the extra operating module. Various models with one-button or separate up-stop-down buttons are available. Some models are fitted with a mushroom emergency button. Other models are inside a lockable casing with key.

### Wireless and batteryless units

Another possibility is a wireless and batteryless push button unit. This is a convenient solution when it is difficult or too expensive to install a cable between the push button unit and the control unit.

The wireless push button unit does not require a battery. Pushing the button generates the necessary power to feed the transmitter.

The wireless transmitter has a theoretical range of 100 meters, depending on steel constructions and electronic circuits within the area.

Available kits for ASSA ABLOY M External buttons and activators

Name	Type	Remarks
