ASSA ABLOY

ASSA ABLOY Entrance Systems

The global leader in  
door opening solutions

## Open your industrial door with your mobile phone

### Key Benefit

Convenience

Security

Efficiency

### Using the GSM network

Private parking garages, such as office buildings, hospitals and apartments often need to allow a vehicle to access a parking garage for a limited period. Traditional solutions include paper tickets, vending machines and vouchers. ASSA ABLOY Entrance Systems now introduces a new solution based on our GSM telephone network.

When the device is called by someone with a phone, an 'open' command is given to the control unit and the door will open. In 'mode all' any caller can open the door. In 'mode phone list' only pre-programmed callers can open the door, using number-recognition.

### Requirements

The ASSA ABLOY mobile phone door opener can be connected to any operator that allows external impulses like remote controls or radars. The device is recognised as an external impulse button.

All functions like the passdoor switch and disengagement of the motor can still override this system. The mobile phone door opener is often combined with the automatic closing function, so the door closes after the vehicle or person passes the door.

It requires no extra mobile app or WiFi. In fact, it only requires a local mobile sim-card with subscription.

## Overview

## Technical details

### ASSA ABLOY M Mobile phone door opener
