

# Modernization Kit ASSA ABLOY M Printing on overhead sectional door leaf

ASSA ABLOY

ASSA ABLOY Entrance Systems

The global leader in  
door opening solutions

Key Benefit

Aesthetics

## Let your door leaf communicate

### A new surface finishing

In addition to pre-coated and shop-painted panels, the 1042 panel is now also available with a full colour print. The possibilities are unlimited and the quality is superior to that of traditional stickers.

### Practical applications

Although full-colour artwork is possible, most applications will be simple visitor instructions, name tags, number tags and logos.

Another possibility is to print a pattern on the door leaf, to let the door blend in with the design of the building facade.

### Printing vs stickers

A traditional technique in our industry is to put stickers on the door leaf. The downside of a sticker is that it is not very resistant to sunlight and water. A sticker needs to be "cut" between two sections, which makes it very sensitive to wear & tear.

When printing on the door leaf, the artwork will be put in a computer that calculates how to print on each section, even taking into account the edges of the sections. The computer file is saved, so a section can always be re-printed if needed in the future.

The resistance to sunlight and rain is equal to that of a shop-painted door section.

## 1042 Panel with printing

## Printing vs stickers

A sticker loses quality in the panel grooves

Printwork runs all the way in the section joint

## Technical data

### ASSA ABLOY M Printing on door leaf

Specifications: . Full-colour  
. High gloss or matte finishing

Available panel types: . S1: Normstahl OSP42A, Alsta TX42, Portsystem 42TPP  
. S2: Crawford OH1042P
