

Modernization Kit ASSA ABLOY M Foot lock for industrial doors

ASSA ABLOY

ASSA ABLOY Entrance Systems

The global leader in
door opening solutions

Key Benefit

Security

Let your door lock itself

Mechanical locking

On premises where an overhead sectional door is manually operated and not well supervised, it may be advisable to make the door automatically lock itself after closing.

If a mechanical lock is not consciously engaged, a manually operated door can always be opened. The footlock is a mechanical lock that is installed on the track. When the door closes, the lock automatically pushes a rigid steel hook into the sturdy bottom bracket on the door leaf, making it impossible to open from the outside.

Easy to use

The foot lock does not require any manual handling to be locked. Instead, the foot lock goes into locked mode automatically as soon as the door is fully closed. This makes it impossible to forget to lock the door.

To unlock the door, step on the pedal to release the footlock and at the same time lift the door to open it.

The key advantage of the footlock is that the door is always locked. It cannot be forgotten. It also makes it possible to exit the door without needing to lock it from the inside.

Available kits for
ASSA ABLOY M
Foot lock

Name	Type	Remarks
Lock foot for 2" / 5/6 track kit	For all 2" track, 5-track and 6-track types	Default is left, can be changed to right

Benefits

Key benefits are:

- Prevents that the door leaf can be lifted
